

6.90m Long Wheelhouse

**CHEETAH SURVEY VESSELS**

Cheetah Marine Survey Vessels accommodate many different equipment systems. Typical equipment used includes multi beam echo sounders, side scan sonar, magnetometers, sub bottom profilers and acoustic doppler current profilers. Apart from surveying seabed conditions, fish population studies, acoustic tracking, water quality and sediment sampling can be undertaken.

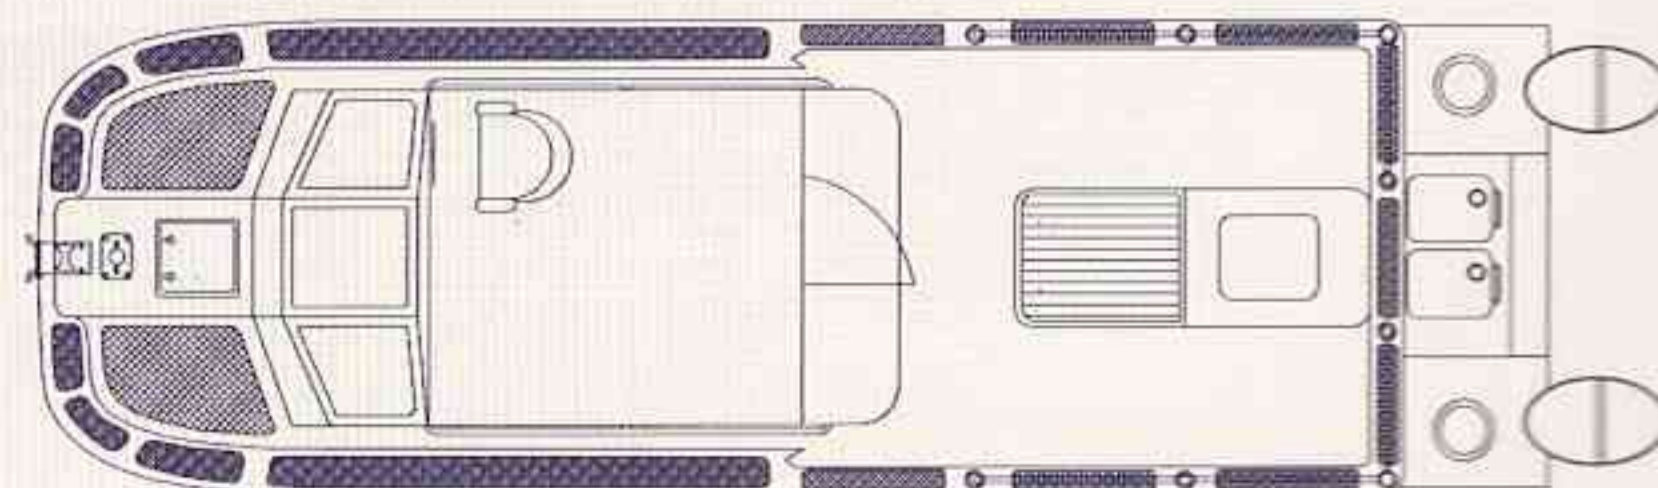

The 2.1m wheelhouse gives ample space for equipment installation, storage and work space for personnel. Stainless steel racks on flexible mountings house computers. Transducers can be fitted in the hull, side mounted or centrally mounted.

<b>MOULDED LENGTH</b>	6.90m
<b>LOA</b> Including pods	7.60m
<b>BEAM</b>	2.40m
<b>DRAUGHT DEPENDING ON LOAD</b>	0.25m
<b>DECK SPACE</b> Long Wheelhouse	3.10m x 2.20m
<b>U.L. WEIGHT</b> Ex Engines	1500kgs

**ENGINES**

Typical engine installations	Max	Cruising
1 x 90hp Honda Outboard	22	17 knots
2 x 50hp Honda Outboards	23	18 knots
2 x 75hp Honda Outboards	28	22 knots

All stainless steel work is in marine grade 316 and is custom built in our own factory.

This includes safety rails to MCA requirements, masts for radar, navigation lights, GPS and VHF, gentries and davits, both side and aft mounted.

A diesel generator can be fitted on deck in a moulded box which doubles as a work bench.

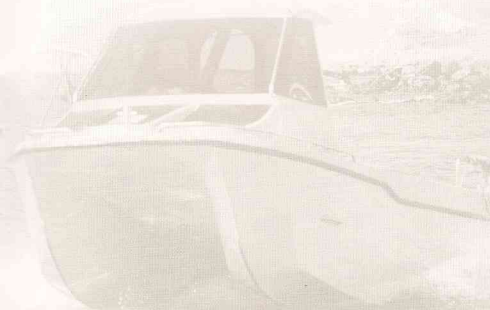

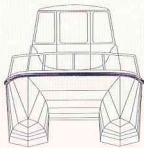

Power is supplied by four stroke petrol or diesel outboard engines. The excise duty on petrol can be reclaimed in the U.K. for commercial uses thus making the fuel cost similar to diesel.

The engines are mounted on marine aluminium pods bolted to the transom leaving the entire deck area free to use.

Fuel is stored between the two engines. This means that any spillage does not enter the boat.

Each hull is divided into watertight compartments using 100mm structural foam bulkheads.

The 6.9m is trailerable and a custom built trailer is available.
